

Meghana Basavanna

(586)351-8086 / Meghana24.basavanna@gmail.com / [LinkedIn](#)

SUMMARY

Software Engineer with **5+ years** of experience delivering user-centric enterprise applications in the telecom and healthcare domains. Experienced in developing responsive and reusable UI components using **Angular**, **TypeScript**, **JavaScript**, and Lit/Web Components, integrated with **RESTful API** services and analytics dashboards using Chart.js. Skilled in **backend** development with **Java** and **Spring Boot**, including designing API response structures, creating REST endpoints, and integrating frontend and backend services. Proficient in Agile/Scrum development, CI/CD pipelines using Jenkins, and version control with Git.

EDUCATION

University of Michigan–Dearborn - M.S. Computer & Information Science, GPA 3.96/4.00 (Aug 2024 – May 2026)

VTU (India) - B.E. Computer Science, GPA 3.8/4.00 (Aug 2015 – Jun 2019)

SKILLS

Frontend: Angular, TypeScript, RxJS, Lit / Web Components, HTML5, SCSS, PrimeNG, Chart.js.

Backend & Integrations: Java, Spring Boot Microservices, RESTful Web Services, SOAP, Postman, API Integration.

Database: Oracle, SQL (CRUD, Joins), MySQL, PostgreSQL.

Testing: Playwright, Jasmine, JUnit.

CI/CD Concepts & Tools: Jenkins, Docker, Git, SonarQube.

Cloud: AWS, GCP.

Languages: C#, JavaScript (ES6+).

WORK EXPERIENCE

Philips Healthcare - Hospital Patient Monitoring Unit

Apr 2022 – May 2024

Bengaluru, India

- Owned the **ST Compound Numeric (ECG)** module end-to-end, utilizing **Lit and TypeScript** to handle live data with 90% rendering precision using **ResizeObservers** across **dynamic sizing containers**; optimized performance for high-frequency data streams by implementing **OnPush Change Detection** and **TrackBy** functions, reducing CPU usage by 20% on low-spec patient monitor hardware.
- Architected a scalable hybrid UI framework by integrating **Lit-based Web Components** into the **Angular** ecosystem; defined the component communication standards and folder structure, reducing cross-team code duplication by **30%** across 5+ patient monitoring products.
- Engineered **real-time vital sign visualization using RxJS Observables** to efficiently manage high-frequency data streams, ensuring smooth UI updates and application stability by preventing memory leaks through proper subscription management.
- Collaborated with **Product Owners** to translate complex clinical requirements into empathetic, **user-centric** interfaces; utilized **Angular Template Driven Forms** to develop robust and intuitive data entry screens for patient monitoring.
- Developed **10+ reusable Web Components** ensuring strict type safety and reactive property updates for consistent behavior across 5+ clinical products.
- Established **Storybook** as a centralized component playground, enabling teams to **visualize** and test independently; this "living documentation" eliminated manual KT and **cut integration effort by 15%**.
- Won the **"Eager to Improve and Inspire"** award for fast learning and exceeding expectations with business-impactful deliveries.

Accenture - Application Development Analyst

Jun 2019 – Mar 2022

Bengaluru, India

- Developed responsive Wi-Fi onboarding flows and client configuration pages using **Angular Reactive Forms**, utilizing **CSS media queries**, **Flex** and **Grid** layout to ensure a seamless, mobile-first experience across tablets and mobile devices.
- Conceptualized and developed a Dynamic Splash Page Builder using **Angular Form Builder** and **Form Group** controls, allowing admins to generate Wi-Fi connection pages for various login behaviors, without coding, reducing manual development effort by 30%.
- Created reusable **Angular validation directives** to standardize email/phone/password rules across forms, enabling single-point updates and reducing manual change effort by **~40%** during client-driven validation updates.
- Led the migration** from Angular 8 to 14, resolving critical breaking changes and deprecated dependencies, which resulted in improved application performance, faster build times and enhanced stability.
- Supported backend development using **Java Spring Boot** by developing and integrating **REST API endpoints**, designing request/response payload structures, and enabling smooth communication between Angular frontend and backend services for SSID Bandwidth Association features.
- Secured application by designing a global **HTTP Interceptor** for centralized **JWT token** injection and 401-unauthorized redirects, coupled with Route Guards to manage secure user sessions and prevent unauthorized access in compliance with data privacy requirements.
- Partnered with **onsite** teams for live device testing and production issue triage, providing rapid fixes that stabilized releases during critical deployment timelines.

ACADEMIC PROJECTS

- Engineered** a Django-based web application to automate test and lint coverage reporting using **pytest** and **pylint**, and represented the coverage visually using charts. – Jan -2026
- Architected** an interactive frontend with **Chart.js** and **PyDriller** to visualize commit history and employee performance, enabling managers to make data-driven decisions on team productivity. – Jan-2025
- Developed and deployed a salon appointment booking application using PHP, C#, SQL, and HTML/CSS with automated SMS/email confirmations via **PHPMailer**, leveraging **AWS** services including **Amazon RDS** for database management, **Amazon S3** for storage, and **Elastic Beanstalk** for hosting and deployment. – Aug-2024
